

CHERRY CREEK MACHINE

Quality Form: Controlled Document

Document Number	CCM-QF-012	Revision	A
Title	Supplier Quality Requirements	Effective Date	08/31/2026
Document Owner	Quality Manager / Management Representative (interim: Kevin Toews)	Supersedes	QP06 Purchasing Rev 0 Attachment 1, Supplier Flow Down Requirements
Approved By	Kevin Toews, Partner: Operations, Finance & Business Systems	Approval Signature / Date	
Governing Clause	AS9100D 8.4.3 Information for external providers	Also Supports	8.1.4, 8.4.1, 8.4.2, 8.5.1, 8.7, 9.1, 10.2

1. Purpose and Application

This document states the quality requirements Cherry Creek Machine places on its external providers. It applies to every purchase order Cherry Creek Machine issues for material, parts, hardware, subcontract machining, outside processing, special processes, calibration and test services, and any other product or service that affects the conformity of product Cherry Creek Machine delivers to its customers.

It does not apply to purchases that do not affect product conformity, such as office supplies, utilities, insurance and software.

This document is published at ccmachine.com/supplier-quality and is referenced by number, revision and address on the purchase order. Suppliers are responsible for working to the revision in force on the date of the order.

2. Acceptance

Acceptance of a Cherry Creek Machine purchase order, by acknowledgement or by shipment, constitutes acceptance of these requirements. Where a requirement stated on the face of the purchase order conflicts with this document, the purchase order governs. Where a customer requirement is flowed down on the purchase order, that requirement governs over both.

3. Product, Process and Revision Requirements

- **Supply exactly what is ordered.** Part number, revision, specification, quantity, material and condition are as stated on the purchase order and its attachments. Substitution of material, specification, process or source is not permitted without prior written approval.
- **Work to the stated revision.** Where a drawing, model, specification or process standard is cited, the revision level cited on the order applies. If no revision is stated, request one before proceeding.
- **Approval of product, processes and equipment.** Where the order requires approval of a process, equipment, method or first piece before production, obtain that approval in writing before proceeding.
- **Release of product.** Product is released only against the acceptance requirements stated on the order.

4. Special Requirements, Critical Items and Key Characteristics

Where the purchase order or attached documentation identifies a special requirement, a critical item, or a key characteristic, the supplier shall apply controls sufficient to ensure it is met, retain the resulting records, and make them available to Cherry Creek Machine on request. Variation in an identified key characteristic shall be controlled and monitored.

5. Personnel Competence and Awareness

The supplier shall use personnel competent for the work performed, including any qualification or certification required by the order, the specification, or the customer. The supplier shall ensure its personnel are aware of their contribution to product conformity, their contribution to product safety, and the importance of ethical behavior, including the accurate and honest recording of inspection and test results.

6. Inspection, Test and Verification

The supplier shall perform the inspection and testing required by the order and the applicable specifications, using measuring equipment calibrated and traceable to national or international standards. Records of the actual results shall be retained. Statements of conformance are not a substitute for recorded results where results are required.

Cherry Creek Machine, its customers, and regulatory authorities reserve the right to perform verification activities at the supplier's premises. Verification by Cherry Creek Machine, at the supplier's premises or on receipt, does not relieve the supplier of responsibility for supplying conforming product, and is not evidence of effective control of quality by the supplier.

7. Documentation Required With Shipment

Document	When required
Certificate of conformance	Every shipment. States the purchase order number, part number, revision, quantity, and conformance to the stated requirements
Material certification with traceability	All raw material and material-bearing product. Includes heat, lot or batch identification traceable to the supplied product
Special process certification	All heat treatment, plating, coating, welding, non-destructive testing and other special processes. Names the process source and the specification and revision performed to
Test and inspection results	Where required by the order, the specification, or a flowed-down customer requirement
First article inspection report	Where required by the order, prepared to AS9102
Calibration certificate	Calibration and test services. States the standards used and their traceability, and the

as-found and as-left condition

Shipments received without the required documentation are treated as a nonconforming receipt and are recorded against the supplier's performance.

8. Notification of Nonconforming Product

The supplier shall notify Cherry Creek Machine in writing on discovering that nonconforming product has been shipped, or that product already shipped may be affected by a nonconformity found later. Notification shall identify the affected purchase orders, parts, quantities and lots.

Nonconforming product shall not be shipped without written authorization from Cherry Creek Machine. Where authorization is given, the disposition and its scope shall be recorded on the shipping documentation. The supplier has no authority to accept nonconforming product as-is or to repair it on Cherry Creek Machine's behalf.

9. Notification of Change

The supplier shall notify Cherry Creek Machine and obtain written approval before any of the following:

- A change to the product, or to the process, method or specification used to produce it.
- A change of sub-tier supplier, including a change of special process source.
- A change of manufacturing facility location.
- A change to the supplier's quality management system certification or accreditation status, including suspension, withdrawal or a change of scope.

10. Counterfeit Part Prevention

The supplier shall prevent the delivery of counterfeit and suspect counterfeit product. Product shall be sourced from the original manufacturer, an authorized or franchised distributor, or a source approved in writing by Cherry Creek Machine. Purchase from independent brokers or unverified sources is not accepted. Documentation of traceability to the original manufacturer shall be provided.

Suspect counterfeit product is not returned. Product that Cherry Creek Machine determines to be counterfeit or suspect counterfeit is quarantined and is not returned to the supplier, because returning it moves the problem to the next buyer. The supplier is liable for the cost of the product, of the investigation, and of any resulting recall or rework, and the incident is reported as required to the original manufacturer, to industry reporting programmes, and to the relevant authorities.

11. Foreign Object Debris

The supplier shall control its processes, handling and packaging to prevent, detect and remove foreign objects and debris, so that product is delivered free of chips, swarf, loose material, and packaging residue.

12. Flow Down to Sub-Tier Suppliers

The supplier shall flow down all applicable requirements of the purchase order to its sub-tier suppliers, including this document, any customer requirements identified on the order, key characteristics, critical items, special requirements, and record retention obligations. The supplier remains responsible for product and services obtained from its sub-tier sources.

13. Records and Retention

The supplier shall retain records relating to each order, including inspection and test results, material and process certifications, and traceability records, for a minimum of seven years after completion of the order, or longer where the purchase order specifies. Records shall not be destroyed before that period expires, and the supplier shall notify Cherry Creek Machine before disposal.

14. Right of Access

Cherry Creek Machine, its customers, and regulatory authorities have right of access to the applicable areas of the supplier's facilities and to the applicable records relating to Cherry Creek Machine orders, at any level of the supply chain. The supplier shall extend this right of access to its sub-tier suppliers.

15. Supplier Performance

Cherry Creek Machine monitors delivered quality and on-time delivery for every supplier of quality affecting product and services. Performance below the threshold set in CCM-QP-084 results in a self-audit survey, enhanced receiving verification, and, where performance does not recover, removal from the approved supplier list.

16. Export Control and Screening

Technical data supplied by Cherry Creek Machine, including drawings, models, specifications and programs, is provided solely for the performance of the order. It shall not be released, transferred or disclosed to any other party, or to any foreign person, without prior written authorization from Cherry Creek Machine, and shall be returned or destroyed on request. Suppliers are screened against United States restricted and denied party lists before the first order.

17. Questions

Questions on these requirements, completed supplier surveys, and requests for approval under Sections 3, 8 and 9 are directed to ktoews@ccmachine.com.

18. Revision History

Rev	Date	Description of Change	Approved By
A	08/31/2026	Initial issue. Replaces QP06 Purchasing Rev 0 Attachment 1, Supplier Flow Down Requirements. Establishes the requirements communicated to external providers under AS9100D 8.4.3.	K. Toews
